1.0 Introduction

1.1 Scope

The following document is intended as a reference for new and existing users of IB Australia's mobile order creation system. Use this document to familiarise yourself with the systems design and best practice on how to use it. Should you encounter any issues when using the system, please reference this document as it will help troubleshoot most common issues. If you continue to have issues after consulting this guide please contact our team's client liaison.

Team 17 - Client Liaison
Jack Thompson

Email: Jack.Thompson3@optusnet.com.au

1.2 System Overview

The new system aims to streamline the process of recording customer orders made either in person or over the phone. It compliments IB Australia's existing MYOB order management system through allowing staff to add items to customer orders by scanning the barcode shown on the tag of each physical product. The system is mobile compatible and is able to use the existing in-built camera in most models of smartphones. Automating the process of barcode scanning will save time, improve consistency and reduce error when compared to manually reading and entering barcode numbers into IB Australia's MYOB order management system.

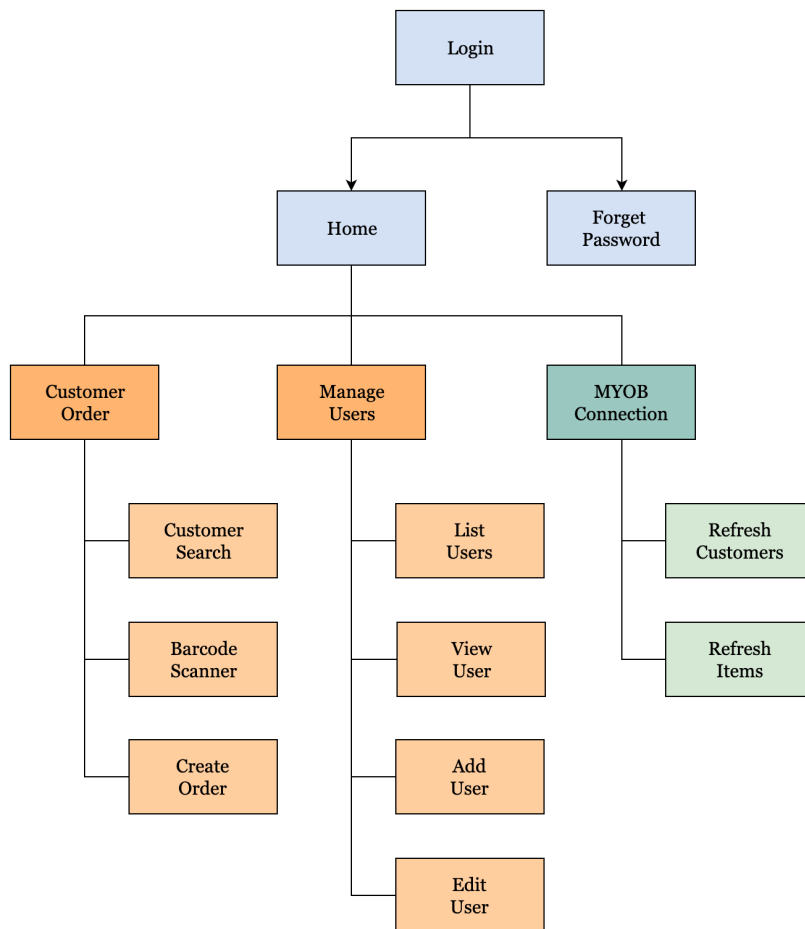

The process of order creation within the new mobile system is designed to mirror the typical workflow of a staff member creating a customer order in MYOB. To create an order:

1. First search for the customer for whom you are creating an order.
2. When the desired customer is selected, use the create button to start an order
3. Items may be added to the order using the provided barcode scanning feature
4. The desired quantity of each item can be changed within the order form
5. Once you are satisfied with the order, click submit to upload order to MYOB system

The new mobile system creates customer orders using a local copy of data imported from the existing MYOB order management system. This includes both customer and product records downloaded from MYOB. To ensure you are using the most recent copy of this information it is recommended you click the refresh customers and items buttons when you first use the system on a given day. The refresh process may take around 2-3 minutes.

Due to the sensitivity of the information contained within the application access control has been implemented through the inclusion of a login page. Additional user profiles may be created, edited and deleted within the system itself under the 'manage users' pages. If you forget your password you may reset it using the provided forget password feature.

1.3 Site Map of Current System

1.4 Expected System Users

The new mobile order creation system is designed primarily for use on mobile devices by sales staff employed by IB Australia. This is first and foremost a Business-to-Employee system for internal use within IB Australia.

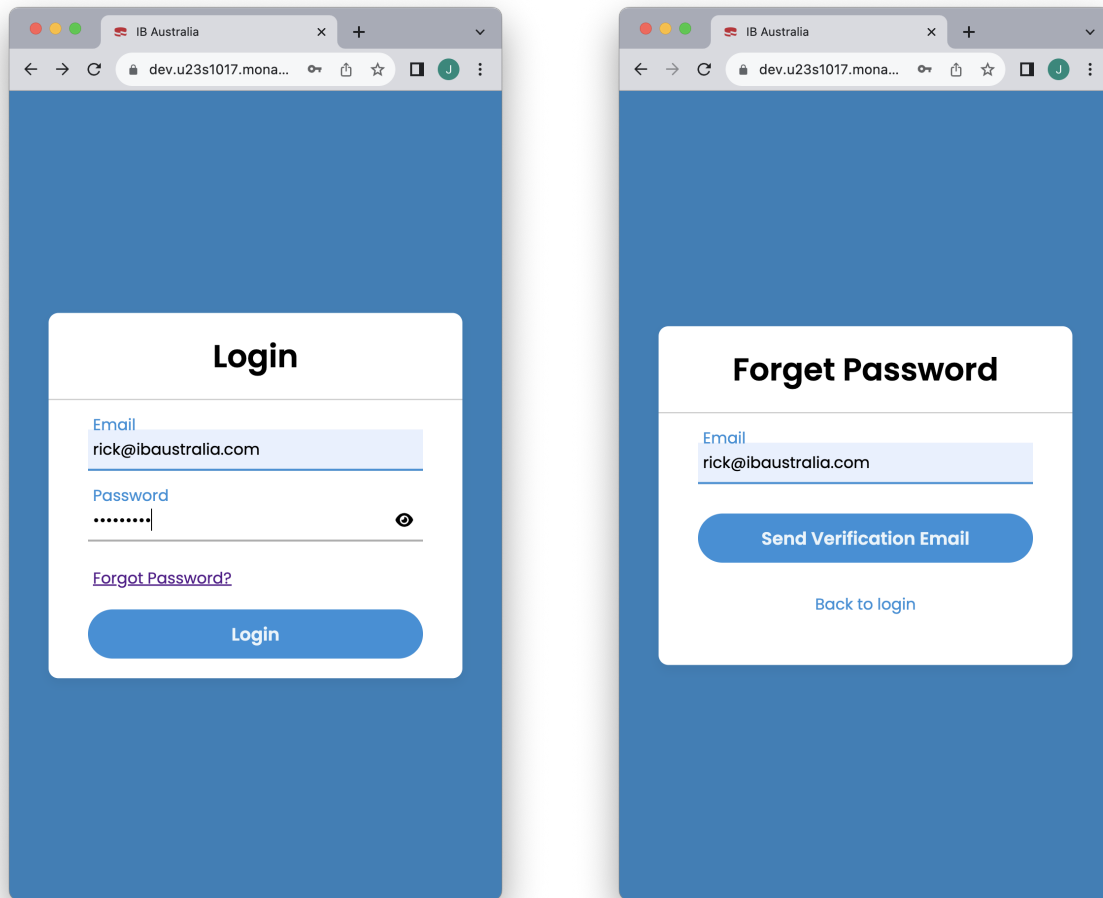

External stakeholders such as customers and suppliers of IB Australia should not be given access to this system.

User accounts within the new system are divided into administrators and regular users. This reflects the differing seniority and authority of staff within the business by limiting the permissions available to regular users.

Both account types are able to create new customer orders using the system. However, only the administrators are able to create, view, edit and delete user accounts within the system.

Whether a user account has administrator permissions can be viewed and changed by other administrator users. There must be at least one administrator account at all times.

2.0 Login

2.1 Login

This is the first page you will see when accessing IB Australia's mobile order system.

To access the rest of the website you will need to enter a valid staff email address and password, and then click the large blue button labelled 'login'

Should you forget your password, click the button labelled 'forgot password?' to navigate to the forget password page.

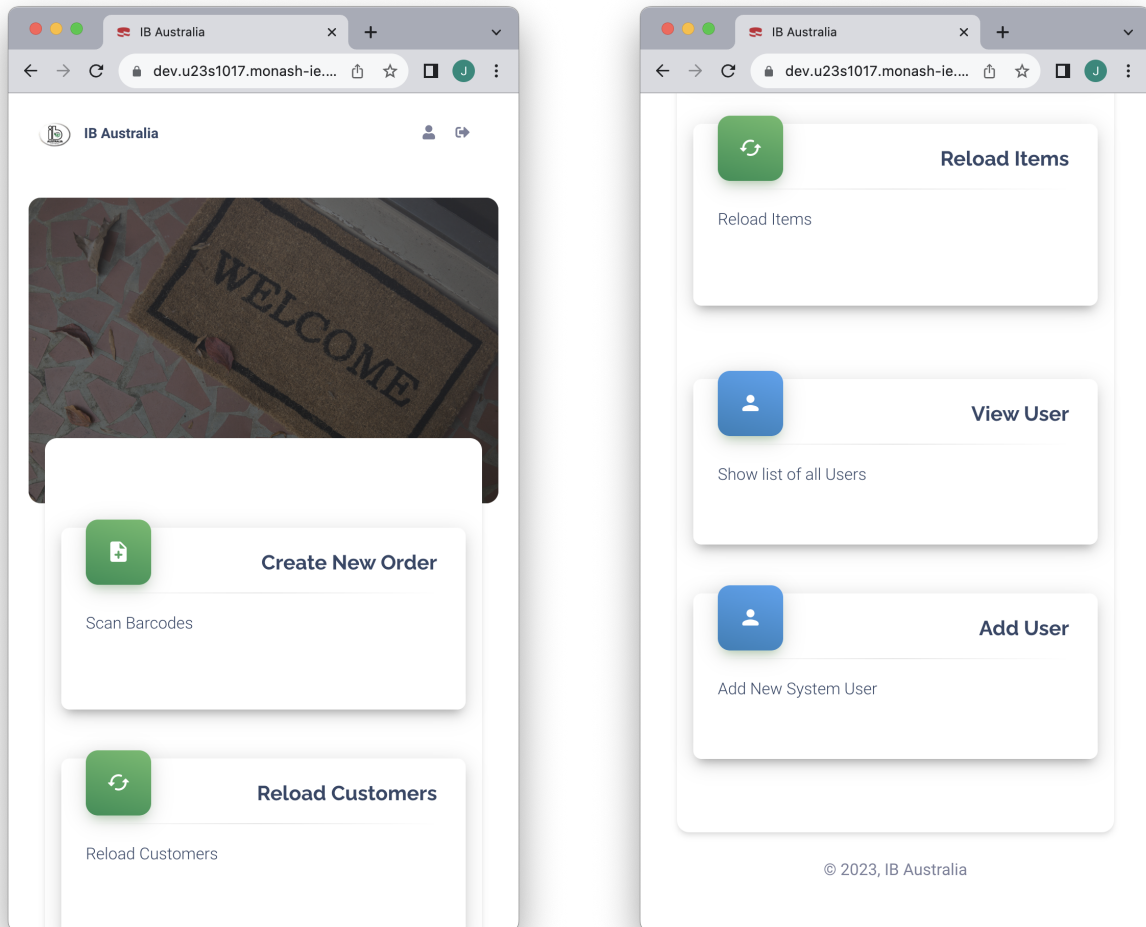

2.2 Forget Password

By entering your staff email address into the provided field and clicking 'send verification email' you will be sent an email instructing you on how to reset your password. Use the link provided within this email to create a new password for your user account.

If you do not have a current staff email account or an existing user account within the system, this password reset will not work.

Please contact your manager for further assistance if issues persist.

3.0 Navigation

3.1 Homepage

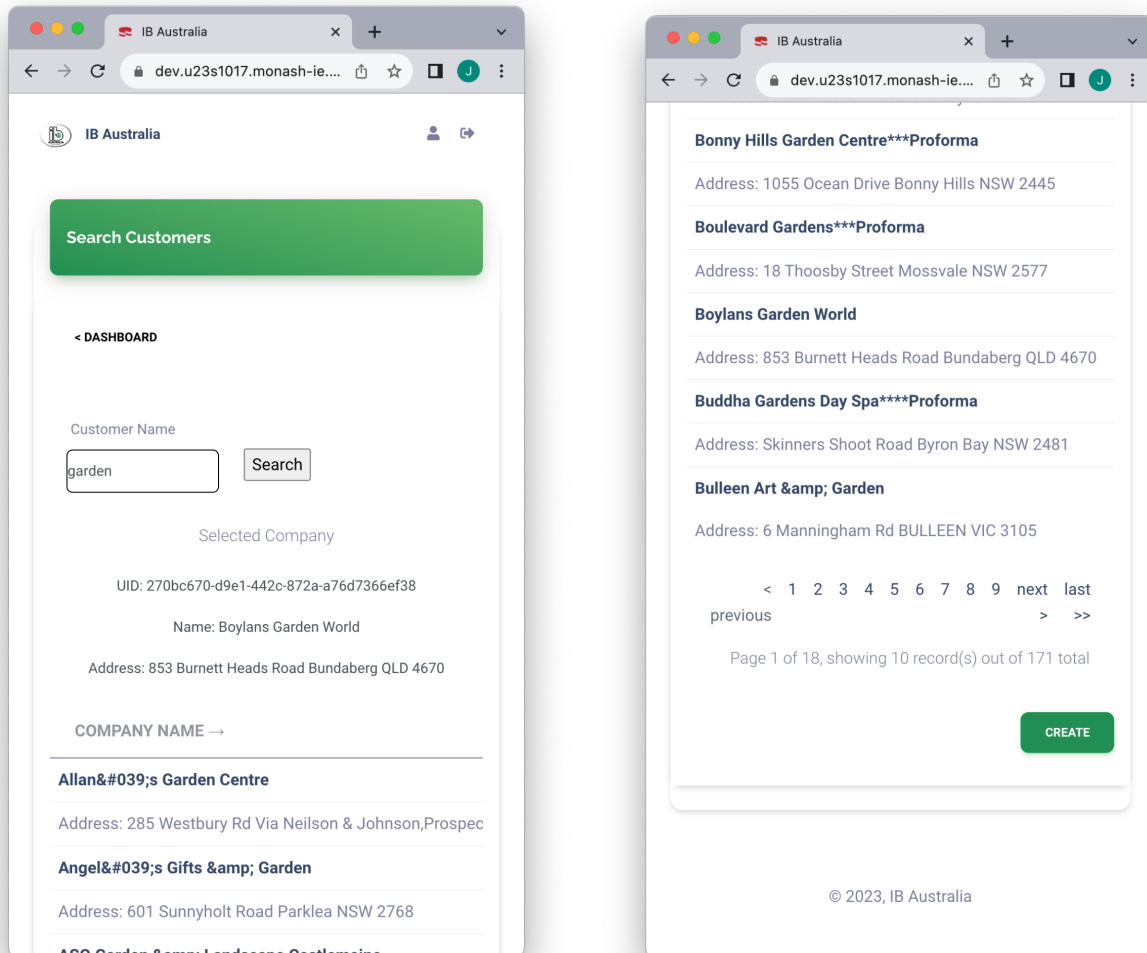

After a successful login attempt you will be taken to the website homepage.

From here you can access all websites key features including:

- a) **Create New Order**
Clicking this button will take you to customer search and begin the process of creating a new customer order.
- b) **Reload Customers**
Clicking this button will update the customer list stored within the system. This will take 2-3 minutes after which a green banner will appear with a confirmation message.
- c) **Reload Items**
Clicking this button will update the item catalogue stored within the system. This will take 2-3 minutes after which a green banner will appear with a confirmation message.
- d) **View User**
Clicking this button will take you to the user index page which shows a list of all the users who currently have access to the system.
- e) **Add User**
Click this button will take you to a form through which you can add a new user account.

4.0 Customer Order Creation

4.1 Customer Search

Upon clicking the 'Create New Order' button on the home page you will be taken to the customer search. This is the first step in the customer order creation process.

4.1.1 Existing Customer

Customer search page includes a list of all existing customers currently stored within IB Australia's MYOB order management system.

Enter a business name within the search field and click 'search' to narrow the list of customers shown. This also works with partial names.

When you find the customer you are looking for, click on its business name to select it. You can see if a business has been selected by checking whether the name and address are shown at the top of the page.

Click the 'create' button on the bottom right of the page when you are ready to start a new customer order for the selected business.

If the customer you are looking for does not appear after searching, it is possible this customer was only added to MYOB recently and has not been uploaded to the system.

It is recommended that before you start creating an order that you click the 'refresh customers' button on the homepage to make sure you are using the most recent customer information from MYOB.

4.1.2 New Customers

If you are dealing with a new customer for the first time, their details will not have been recorded in MYOB yet.

Therefore you should select one of the following cash sale accounts instead:

COMPANY NAME ↓	Address
Cash Receipts	
Cash Sales	
Cash Sales - NSW	NSW 2000
Cash Sales - QLD	QLD 4216
Cash Sales - SA	SA 5000
Cash Sales - VIC	VIC 3194
Cash Sales - WA	WA 6026

As with existing customers, click the 'create' button on the bottom right of the page when you are ready to start a new customer order.

Adding new customers to MYOB is beyond the scope of this mobile order creation system. If you need to add a new customer, please do so with the interface provided by IB Australia's existing MYOB order management system.

4.2 Add Items to Order

Please scan the doormats barcode in the below camera to add to customers order

New Order

Name: \$2 Plus Shop ***Proforma

Address: Shop 2/854 Burwood Hwy Ferntree Gully VIC 3156

Enter item number

Add Item

ITEM #	QTY	ITEM DESC
23-8052	1	Latex BCoir,Water Melon45:
23-7441	1	Premium FM2 Coir Deer 50:

Memo about order

After selecting a customer and clicking the 'create' button on the customer search page you will be taken to the orders page shown above.

From here you can add new items to the order either automatically using the barcode scanner or manually by typing out the item code in the provided form.

4.2.1 Adding Items using Barcode Scanner

To add items using the barcode scanner:

- 1) Enable the system to use your device's camera
- 2) Hold a copy of the items barcode within clear unobstructed view of your device's camera
- 3) Wait a few seconds for the system to read the barcode
- 4) Check if item has been added by scrolling to bottom of the page
- 5) Repeat steps 2 - 4 for each additional product within an order

For best results use the barcode shown on the price tag of the physical product. Alternatively you may use a digital image of a product barcode, though this is less reliable.

Note: It is a known issue that reflections and image distortions prevent the barcode scanner from working correctly. For this reason physical paper barcodes will scan more easily than digital images.

4.2.2 Adding Items using Manual Entry

If you are having problems scanning a barcode you may manually enter the item using the code listed above the barcode on each tag.

To add a new item to an order manually:

- 1) Find the doormats item code (starting with 23)
- 2) Enter the number into item search
- 3) Click submit button
- 4) Check if item has been added by scrolling to bottom of the page
- 5) Repeat steps 1 - 4 for each additional product

4.3 Manage Order Contents

New Order

Name: \$2 Plus Shop ***Proforma

Address: Shop 2/854 Burwood Hwy Ferntree Gully VIC 3156

Enter item number

Add Item

ITEM #	QTY	ITEM DESC

38	\$53.95	FULL PRICE	FALSE

Total Price: **\$110.80**

SUBMIT ORDER

© 2023, IB Australia

Note: Not all of the table is visible at one time, you will need to scroll to see hidden columns.

4.3.1 Order Contents

After you have successfully added an item to an order it will appear within the above table.

The table includes the following fields

- ITEM # : the unique item code as it appears in MYOB
- QTY : the amount of this item desired by the customer.
(This can be adjusted by typing within the provided text box)
- ITEM DESC : the item description as it appears in MYOB
- STOCK : how many of this item are currently in stock
(This may differ from MYOB if you have not clicked 'Refreshed Items' before use)
- PRICE : the price of a single item as it appears in MYOB
- DISCOUNT PRICE : the discounted price used when customer buys in bale quantities
- DISC % : the discount applied when customer purchases in bale quantities
- BALE QTY : the size of a bale for that item as it appears in MYOB
- SUBTOTAL : the price subtotal for the requested quantity

4.3.2 Update Item Quantity

You may alter the quantity of a requested item through selecting the text box within the QTY column for a given order line and typing the new desired value. If the new value is larger than the bale size for a given item the system will automatically round up to the nearest multiple of the bale quantity.

4.3.3 Remove Items

You may remove an item from an order by clicking on the X symbol at the far right hand side of each order line. Make sure to first check you are clicking the correct X symbol to avoid accidentally removing the wrong item from the pending order.

4.3.4 Memo Feature

At the bottom of each order there is a text area dedicated to order memos. If the customer has special needs or requests, please record these in the provided text field. This will then be attached to the order upon submission to MYOB.

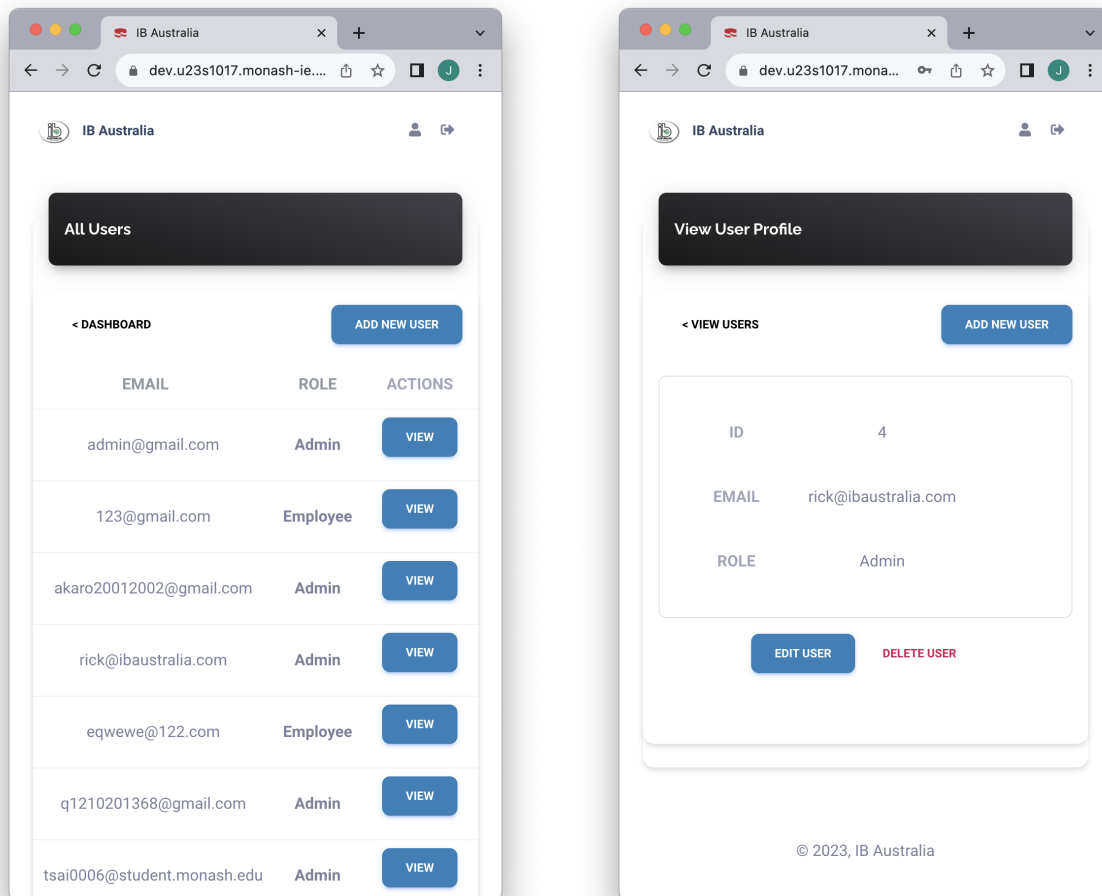

Important: If you are dealing with a new customer under cash accounts, you will need to enter the name and shipping address of the customer within the memo field to ensure the order is sent to the correct business.

4.3.5 Submitting Orders

Once you have reviewed the order and have confirmed that the contents of the order is correct, click the 'submit order' button on the bottom right hand corner of the screen. This will send the completed order to MYOB.

However, if the order is empty or contains items with a desired quantity of zero, the system will prevent order submission until at least one item has been added and all items have a quantity greater than zero.

5.0 Manage User Access

5.1 User Index

To view a list of current user accounts with IB Australia's mobile order system click on the 'view users' button on the homepage. This will take you to the user index page (left).

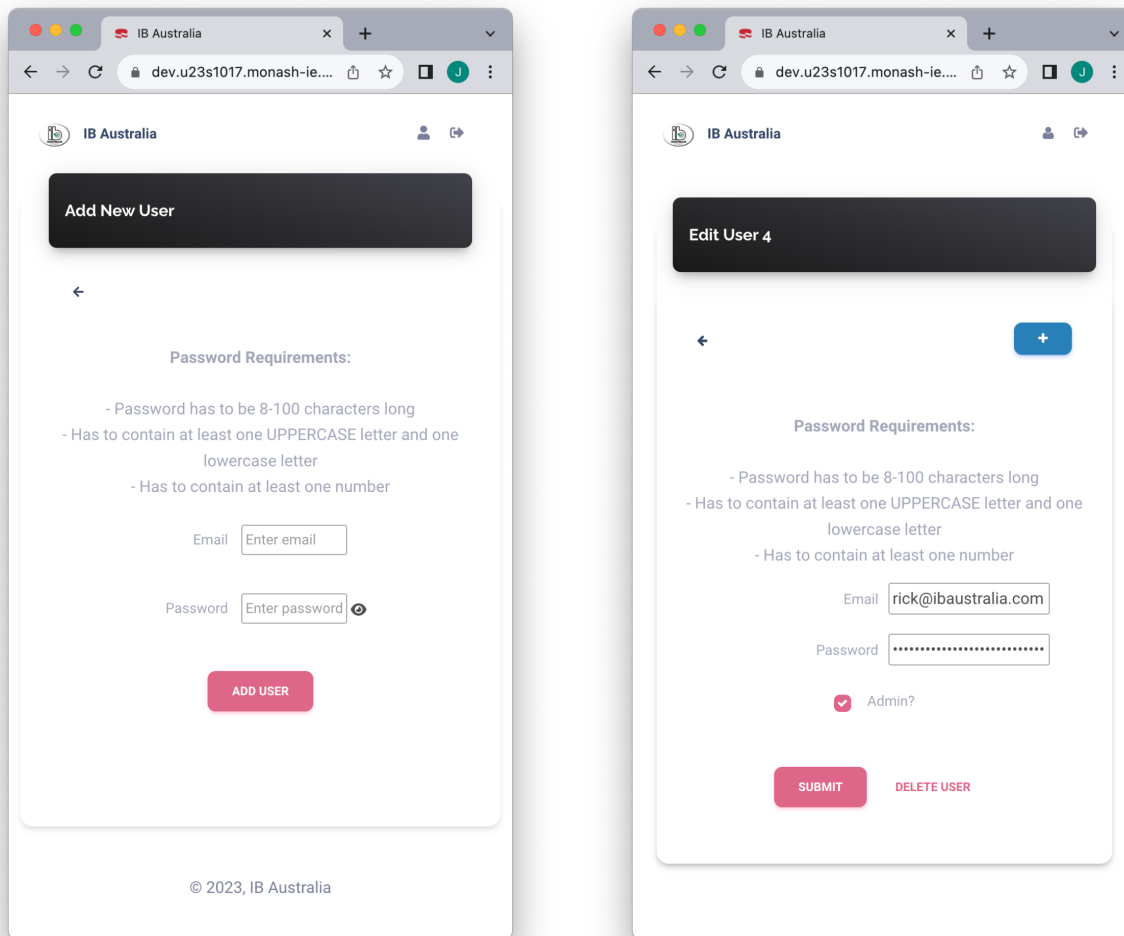

Note: this feature is only accessible to users with administrative privileges. If a user account does not have the admin role they will not be able to see the link to this page on the website home page.

5.2 View/Delete User

To see a more detailed view of a specific user click the 'view' button on the right hand side of the row belonging to the desired user. This will take you to the user view page (right).

From here you can edit the user's login credentials by clicking on the 'edit user' button, or delete the user from the system by clicking the 'delete user' button.

Note: clicking the 'delete user' button will trigger a prompt to confirm whether you are sure you wish to delete the user. If you click 'okay' to this message the user will be gone forever.

5.3 Add Users

To add a new user to the system either click the button labelled 'add user' on the homepage or click 'add new user' within the user index page. This will take you to the following form (left) in which you can set a new user's email address and password.

When entering a new user's password you click the eye icon to toggle whether the password is hidden or visible whilst typing. Once you are satisfied, click the 'add user' button to create the account within the system.

Important: admin must only create new user accounts for current employees at IB Australia. The email for a new user should be the work email address for that employee.

5.4 Update Users

To update an existing user, first navigate to the user index page, then click the 'view' button on the desired user, before finally clicking the 'edit user' button within the view page. This will take you to the following form (right).

Note: The process of updating a user is identical to adding a new user, with the exception of the email and password fields being preloaded with the current user details.
